Well No. 12-3 is located 1980 ft. from S line and 660 ft. from E line of sec. 1

NE 1/4 of SE 1/4 Section 1 17 South 30 East 10N
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)
Square Lake 10N New Mexico
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is _____ ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

Run and cemented 5-1/2" casing at 3,200. Failed to get cement job; recomputed; water shut off; perforated 3173-83 (Livingston Sand); fraced with 16,000 gallons and 16,000 pounds of sand. Well will flow 30 to 75 barrels. Run Baker Drillable Bridging Plug at 3,100; perforated Square Lake Sand 2881-91; fraced with same amount with approximately same result. Rooded out bridging plug. Well will flow something more than 100 barrels per day. Tested 47 barrels in three hours after being shut in 24 hours.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

We desire approval to drill Jackson 18-B to approximately 3200 ft. to test the Square Lake and Lovington Sands. We propose to drill through both of them, case below the Lovington Sand, perforate the Lovington sand and sandfrac. If the Lovington Sand is not found, we will perforate and frac the Square Lake Sand. 8-5/8" will be run to top of salt. 7" will be run to red sand or approximately 2400' and then pulled. 5" will be set to total depth and cemented with 100 sacks.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
