THEORY OF THE EARTH

The theory of the earth is a branch of geology which deals with the origin and development of the earth and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features. The theory of the earth is based on the study of the earth's history and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features. The theory of the earth is based on the study of the earth's history and its various parts. It is a science which seeks to explain the processes which have shaped the earth and its features.

THE EARTH'S HISTORY

The earth's history is a long and complex process. It began with the formation of the earth from a cloud of gas and dust. The earth then cooled and solidified, forming a crust. The crust then broke into fragments, which moved apart and formed the continents and oceans. The earth's history is a long and complex process.
