proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones perti-  
nent to this work.) \*

March, April & May, 1971 production from this well averaged 1/2 BOPD. A test on 6/28/71 produced 0 BO & 1 BW. The well is no longer economical to produce and no remedial possibilities exist. We propose to temporarily abandon well by pulling rods and tubing and capping well with a 2000# WOG valve. The well will be held for a secondary recovery study.
