Section 19-T17S-R31E
Eddy County, NM

Dear Mr. Bratcher,

Devon has submitted a request to the Bureau of Land Management to temporarily abandon the subject well as opposed to permanently plugging. We are currently evaluating the feasibility of developing the Seven Rivers interval for secondary recovery and plugging the well would most certainly necessitate it being re-drilled at a later date. A copy of the "Sundry Notice of Intent" has been attached for your reference.

Please contact the undersigned at 405/552-4528 if you have any questions or require additional information.

Sincerely;
Devon Energy Production Company, L.P.

Senior Engineering Technician

13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

It is Devons intent to further evaluate and develop the Seven Rivers interval for additional exploitation potential. Devon requests, that in lieu of permanently plugging this well, that the wellbore be allowed to be temporarily abandoned prior to being utilized for future use as a Seven Rivers producer or injector. Plugging this well would possibly necessitate it being re-drilled at a future date.

Devon Proposes To Temporarily Abandon The Wellbore as Follows:

1. POOH with 2 3/8" tubing.
2. Clean out wellbore with bit and scrapper.
3. RIH with 5 1/2" CIBP and set at 1,800'.
4. Circulate wellbore full with corrosion inhibited packer fluid.
5. Run MIT, pressure test casing to 500 psi for thirty(30) minutes and submit chart to BLM.

Note: BLM shall be notified 24 hours prior to MIT and test shall be witnessed by a BLM representative.
