13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

Each of the wells on the attached list is to be utilized as an injection well in a 40-acre 5-spot waterflood pattern following the expansion of the Keel West Waterflood Project. To implement this prospect the existing surface facilities must be modified and expanded. The design work for the necessary upgrades are currently underway. As soon as the design work is complete and facility modifications commence operation will begin to return each of these wells to an active status. The surface facilities must be operational before any of these wells can be returned to an active status. It is anticipated that the required facilities will be completely operational in one year; therefore, it is requested that a one year extension be granted to allow the facilities to be constructed so the wells can be returned to an active status.
