

- B. Mat Size: 50' x 100' plus reserve pit.
- C. Cut & Fill: None.
- D. The surface will be retopped with compacted caliche and the reserve pit will be plastic lined.

10. PLANS FOR RESTORATION OF THE SURFACE:

- A. After completion of drilling and/or completion operations, all equipment and other material not needed for operations will be removed. Pits will be filled and the location cleaned of all trash and junk to leave the wellsite in as aesthetically pleasing a condition as possible.
- B. Any unguarded pits containing fluids will be fenced until they are filled.
- C. If the proposed well is non-productive, all rehabilitation and/or vegetation requirements of the Bureau of Land Management will be complied with and will be accomplished as expeditiously as possible. All pits will be filled and leveled within 90 days after abandonment.

11. OTHER INFORMATION:

- A. Topography: The well pad and access road right-of-way are within an area draining generally southwest towards Cedar Lake, ca. 3.1 miles southwest. The access road right-of-way is on top of the Nimenim Ridge sloping gradually to the NW corner of the well pad; the terrain is relatively flat to slightly undulating, with the occurrence of coppice dunes of low height and circumference within the southern part of the access road area, with the interdunal areas showing exposure of caliche soils; the northern part of the access road right-of-way is undulating with rare aeolian deposits overlaying caliche substrata. The well pad is within a drainageway to the south of the ridge, in an area of colluvial and aeolian deposits; the area is dissected with both sheet wash and arroyo cutting occurring. Relatively large coppice dunes occur in the south part of the well pad; residual soils are exposed in the NW quadrant of the pad, adjacent to the ridge.
- B. Soil: The topsoil at the wellsite is Kermit-Berino fine sands.
- C. Flora and Fauna: The vegetative cover is primarily one of grassland environment and scrub-grass scrub disclimax community. The wildlife consists of rabbits, coyotes, rattlesnakes, lizards, dove, quail and other wildlife typical of the semi-arid desert land.
- D. Pond and Streams: None in the area.
