### DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

P-74. 6955, perfs. 6924 to 32 - Due to irregular flow and resulting expense in running costs on this top allowable well, we propose to pull tubing & reperforate the present set perfs. 6924 to 32 plus additional section above these perfs., i.e. 6894, 6900, 6903, 06, 08, 10, 12, 14, 16 & 6920, 22, 24, 26, 28, 30, 32 using casing perf. gun, 2 holes per foot perforated (total 32 holes). Acidize with 1000 gals. acid using balls to break down new perfs. Well to date has been flowing its top allowable, but is becoming more difficult to keep flowing. Perforations are probably partially closed by gyp and corrosion. Work to be performed immediately.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
