..... February 23 ....., 19 57

Well No. 1-Hayfield is located 922 ft. from S line and 3312 ft. from E line of sec. 33

33 33 33  
(1/4 Sec. and Sec. No.) (Twp.) (Range) (Meridian)  
Salador-Mates 1887 New Mexico  
(Field) (County or Subdivision) (State or Territory)

The elevation of the derrick floor above sea level is 3653 ft.

DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

It is planned to drill an 8-1/4" rotary hole to an approximate depth of 150' where 7" surface casing will be set to shut off caving sand and any surface water which may be encountered. 8-1/2" rotary hole will then be drilled to test the lower sand at approximately 700'. If oil is encountered, 8-1/2" oil string will be run. If test results in a dry hole, surface pipe will be pulled and well will be plugged in accordance with U.S.G.S. regulations.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
