DEEDS OF WELLS

(State names of and expected depth of wells, and the names of the owners, and the names of the persons who are to be employed in the work.)

Would like to run Lowells Pilot Point in the area. I would like to have a entry of water with pay. If same is not satisfactory, I would like to have a well plastic to shut off as much water as possible. That well would be used in the old sinkler well. I would like to try, base on results of work done in the old sinkler pool, where it has been very successful in a number of cases. If granted permission to try, if same is successful, will apply for other wells. My reason for wishing to try it is as follows: In this well, with three inch tubing, using a 52" stroke on the unit, running 10 strokes per minute, the well has to be pumped three days, after a shut down, before it starts making any oil. It then gradually comes back to approximately 40 bbls. of oil per day. If speeded up, oil increases but load is so heavy that 1/2" rods pull into so often, that you don't average as much oil as you do at a slower speed where rods do not part, as often. If granted approval and it is successful, I plan to request permission to run some back allowable and pull the well rather hard to thoroughly test, before working on the others.
