DETAILS OF WORK

(State names of and expected depths to objective sands; show sizes, weights, and lengths of proposed casings; indicate mudding jobs, cementing points, and all other important proposed work)

I propose to drill a 1700' Yates line test, using cable tools all the way.

6-5/8" surface casing will be run to the top of anhydrite at approximately 470' and cemented with 150 sacks.

7" oil string will be run to approximately 1650' and cemented in dolomite with 150 sacks.

All casing will be set under procedures approved by the U. S. Geological Survey.

I understand that this plan of work must receive approval in writing by the Geological Survey before operations may be commenced.
