

Test #11 Pressured to 200# and released air; repressured to 200# and released air; repressured to 200# and released air; repressured to 200# and released air; repressured to 200# and released air. No test.

Test #12 Repeated test. Pressured to 1500# with loss of approximately 100# during first seventeen minutes then leveling out for remaining one minute of test.

NO VISTELE LEAK. PRESSURE LEVELING OUT TOWARDS APPROXIMATELY 1400#.

---

A delay was observed to operation of blowout control equipment at the conclusion of testing - closing lines to Hydril hooked up backwards (to be corrected as needed). Closures were made using both closing unit pump and accumulators to the observed pressure of 1500# for test to ram type bops and 1500# for test to Hydril. Accumulators were pressured to 2500# at end of test. Control valves operated as indicated on closing unit manifold at end of test. Bop extentions were not hooked up - rig running drill stem test. No test desired to top of casing using packer, nor to the upper kelly cock (not in rig inventory at time of test), or to the lower kelly cock (not in rig inventory at time of test).
