

10. Upon completion of drilling operations, the degree of restoration of the surface will depend upon if production is established. If the operation is not successful, then the whole drill site will be leveled and contoured back to the original form. All pits will be filled, after drying, and all waste material buried. The access road into the drill site will also be removed and leveled unless the B.L.M. desires it be left in place.

If production is established, then the drill pad area will be required for production facilities and as a work and safety area. However, all pits and waste will be either removed or buried as stated above.

The leveling of the pits and removal of the trash and waste will be done no later than thirty days after drilling operations cease. Any additional or special rehabilitation efforts that the B.L.M. requires will be honored.

11. The surface area of both the access road and drill site are federally owned. the surface is leased to Mr. Jim Ogden for cattle grazing. The area around the drill site has a gradual sloping trend to the north. The surface supports a sparse growth of grass and other semi-arid type vegetation.

It is our plan to employ the Agency of Conservation Archaeology at Eastern New Mexico University to make an archaeological study of the subject area.

12. Operator's representative conducting this drilling operation is:

Mr. Phil Stinson
4016 East Everglade
Odessa, Texas 79760

Phone - Bus. 1/915/683-4871
Home 1/915/362-6240

13. CERTIFICATION

I hereby certify that I, or persons under my direct supervision have inspected the proposed drill site and access route; that I am familiar with the conditions which presently exist; that the statements made in this plan are to the best of my knowledge, true and correct; and, that work associated with the operations proposed herein will be performed by HNG Oil Company and its contractors and subcontractors in conformity with this plan and the terms and conditions which it is approved.
