#### EQUIREMENTS

# 3,000 pel Working Pressure

#### 3 MWP

### STACK REQUIREMENTS

No	iten		Min.	Min. Nominal
1	Flowing		<del>                                     </del>	TOTAL
2	Fill up line		<del> </del>	2.
3	Drilling nipple		<del> </del>	<del>                                     </del>
4	Annular preventer		<del> </del>	
5	Two single or one dual hydraulically operated rams			
60	Drilling speel with 2° min. kill line and 3° min choice line autlets			
66	2" min. kill line and 3" min. choke line outlets in ram. (Alternate to 6s above.)			
7	Valve	Gate [] Plug []	3-1/6"	
8	Gate valve—power operated		3-1/8"	
9	Line to choke manifold			3.
10	Valves	Gate C Plug C	2-1/16*	
11	Check valve		2-1/16"	
12	Casing head		1	
13	Valve	Gate D	1-13/16"	
14	Pressure gauge with need	de valve	<b></b>	
15	Kill line to rig mud pump s	manifold		2.

<u></u>	
.	AMMULAR PREVENTER OLIND RAMS
	PIPE RAMS  PIPE RAMS  DRILLING  SPOOL
•	CASING (B)

CONFIGURATION

OPTIONAL				
16 Flanged valve	1-13/16"			

## CONTRACTOR'S OPTION TO FURNISH:

- All equipment and connections above bradenhead or casinghead. Working pressure of preventers to be 3,000 psi, minimum.
- Automatic accumulator (80 gallon, minimum) capable of closing BOP in 30 seconds or less and, holding them closed against full rated working pressure.
- 3.BOP controls, to be located near drillers position.
- 4. Kelly equipped with Kelly cock.
- 5.Inside blowout prevventer or its equivalent on derrick floor at all times with proper threads to fit pipe being used.
- Kelly saver-sub equipped with rubber casing protector at all times.
- 7. Plug type blowaut preventer tester.
- 8.Extra set pipe rams to lit drill pipe in use on location at all times.
- 9. Type RX ring gaskets in place of Type R.

# MEC TO FURNISH:

- 1.Bradenhead or casinghead and side valves.
- 2. Wear bushing, Il required.

## GENERAL NOTES:

- Deviations from this drawing may be made only with the express permission of MEC's Dritting Manager.
- 2.All connections, valves, fittings, piping, etc., subject to well or pump pressure must be flanged (suitable clamp connections acceptable) and have minimum working pressure equal to rated working pressure of preventers up through chore. Valves must be full opening and suitable for high pressure mud service.
- 3. Controls to be of standard design and each marked, showing opening and closing position.
- 4. Chokes will be positioned so as not to hamper or delay changing of choke beens. Replaceable parts for adjustable choke, other been sizes, retainers, and choke wrenches to be conveniently located for immediate use.
- All valves to be equipped with handwheels or handles ready for immediate use.
- 6. Choke lines must be suitably anchored.

- 7. Handwheets and extensions to be connected and ready for use.
- 8. Valves adjacent to drilling speci to be kept open. Use outside valves except is emergency.
- S.All seemises steel central piping (2000 pei working pressure) to have flexible joints to avoid stress. Places will be permitted.
- 18. Casinghead connections shall not be used except in case of emergency.
- 11.Do not use kill line for routine illi-up operations.
