

3) Location of Existing Wells:

Existing wells within a one-mile radius of the proposed well are shown on Exhibit "F".

4) Location of Existing and/or Proposed Facilities:

A. If the oil well proves to be commercial, the necessary production facilities will be constructed at the well site. See Exhibit "G-2".

5) Location and Type of Water Supply:

Unit Petroleum Company plans to drill the proposed well with fresh and brine water which will be obtained from commercial sources. The water will be transported over proposed and existing access roads.

Water will be disposed of in the reserve pit during completion operations. After the well is completed, water will either be trucked to an approved disposal well or pumped to a disposal system.

6) Source of Construction Materials:

Any caliche required for the pad will come from the location itself, or, if not available, from either a BLM approved, state, or private pit, depending on proximity of said pit.

7) Method of Handling Waste Material:

A. Drill cuttings will be disposed of in the reserve pits.

B. Drilling fluids will be allowed to evaporate in the reserve pits until the pits are dry.

C. Three sides of the reserve pit will be fenced during drilling operations. The fourth side will be fenced after the drilling rig is moved.

D. Water produced during operations will be collected in tanks until hauled to an approved disposal system.

E. Oil produced during operation will be stored in tanks until sold.

F. Unit Petroleum Company will comply with current laws and regulations pertaining to the disposal of human waste.
