If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)

On review of returning this well to production, it was discovered that a pipeline right-of-way was not approved. We have a shut-in pressure of 450 psi. With development of other coal wells in the vicinity, the area de-watering will enhance production from this well. We are also developing a pipeline and water line system into which this well will eventually be tied. We are moving a pump jack and rod pump to the well this week. We are also filing a sundry to tie a gas line to an existing gas sales line in the same section. We will collect and truck water from the site until our water system is completed (expected later this year). We should have the production equipment ready by the 3/31/2004 date you have given us, but will not have the gas sales line installed by that date. We will diligently pursue the gas line tie-in and notify you of initial production.
