13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Well has 1-1/4" production tubing inside of 2-3/8" tubing and Packer. Dakota completion zone has become marginally productive with increased water production and 1-1/4" tubing is plugged with a foreign substance believed to be either old drilling mud/frac sand and/or scale. Kimbell wishes to further evaluate the Dakota zone and requires a "coiled tubing unit" to remove the 1-1/4" plugged tubing from the wellbore and then swab/flow test Dakota completion Interval.

The surface location of this well is on the precipice of a 700' mesa with the well access road climbing the mesa face. Roads have not been suitable for access to large equipment vehicles such as coiled tubing units and/or pulling units since August/September 2003.

Kimbell herein requests that the BLM issue approval for a 4 month Temporary Abandoned status and we will be able to repair roads and access this location in the May/June/July time period to evaluate this well for either continued production operations or a plan for Permanent Abandonment.
