RE: Final Abandonment Notice

30-045-29864

Dear Ms Perkins:

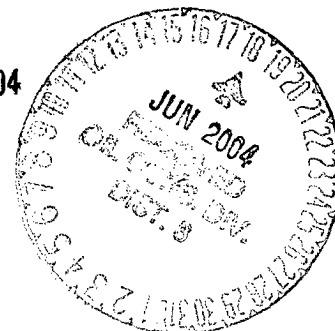

April 27, 2004, we received FANs on the Ute Dome 20-A well in Sec 2, T.31N., R.14W. and on the Ute Mountain Tribal J #7 well in Sec 12, T31N, R14W. On May 28, 2004 Jan Parmenter of the UMU-BIA, Paul Schafley of the UMU-BIA and myself inspected the sites. The BLM is unable to release these sites until they have been re-contoured and reclamation has been performed as per BIA letter (attached) with the sites being weed-free and vegetated. At that time please remit a FAN to the Oil and Gas Section of the BLM in Durango, Colorado.

Sincerely,

/s/ David Swanson

RE: Ute Dome 20A Well
Ute Mountain Tribal J-7

Dear Dave:

After reviewing the above-referenced sites, our agency requires the operator (XTO) fulfill the requirements listed below pursuant to their well-site stipulations prior to final abandonment:

Ute Dome 20 A Well

- 1) Well pad needs to be contoured to blend with the surrounding terrain. The intent is to have the topography of this site resemble what was originally there.
- 2) The above-ground pipe, meter house, wiring and separator piping need to be removed.
- 3) The compacted soil on the pad site needs to be ripped to a depth of 12" and properly prepared for seed. The soil needs to have soil fertility test run by a reputable lab with a report provided to the BIA, fertilized as per analysis, and seeded with BIA recommended seed mix in the fall of the year (Late October thru December) with seed certification tag submitted to BIA.
- 4) Access road shall be contoured to blend with the surrounding terrain, ripped 12" deep if possible, with water bars spaced as per BLM Gold Book Standard. The soil needs to be properly prepared for seed with fertilizer and seeded as per above instructions. Lastly, it needs to be barricaded to prevent re-vegetation disturbance.
- 5) Operator is required to contact BLM with a FAN when vegetation has been established on pad site and access road.

Ute Mountain Tribal J-7

- 1) Well pad needs to be contoured to blend with the surrounding terrain. The intent is to have the topography of this site resemble what was originally there.
- 2) The above-ground pipe (gas-line stub), electric line, and tubing. Also there is a small amount of trash, old wooden pallets and planks that need to be removed.
- 3) The compacted soil on the pad site needs to be ripped to a depth of 12" and properly prepared for seed. The soil needs to have soil fertility test run by a reputable lab with a report provided to the BIA, fertilized as per analysis, and seeded with BIA recommended seed mix in the fall of the year (Late October thru December) with seed certification tag submitted to BIA.
- 4) Access road shall be contoured to blend with the surrounding terrain, ripped 12" deep if possible, with water bars spaced as per BLM Gold Book Standard. The soil needs to be properly prepared for seed with fertilizer and seeded as per above instructions. Lastly, it needs to be barricaded to prevent re-vegetation disturbance.

- 5) Operator is required to contact BLM with a FAN when vegetation has been established on pad site and access road.

It is apparent the operator has attempted to reclaim and rehabilitate this area. While we appreciate the effort, it does not meet the requirement(s) as outlined in their well-site stipulations. Lastly, it is necessary to contact the BIA for consultation and seeding recommendations/timing requirements **prior to** reclamation and rehabilitation efforts at all well sites on the Ute Mountain Ute Reservation. Please have the operator contact our Branch of Real Estate Services at (970) 565-6094 for further details.

We sincerely appreciate the assistance and support of the BLM minerals staff. Please call us at (970) 565-6094 if you have questions or concerns.

Sincerely,

Superintendent
