Dakota & Mesaverde

Dorothy,

The above well came on around 4/28/04 and continues to produce from the open hole location 7182' – 7269'.

Then we added more perfs in the Dakota @ 6972' – 7144' & also perf'd in the Mesaverde @ 4707' – 5127'. All perfs are open at this time.

On 7/1/04 I e-mailed you and said to trash the C-104 for the open hole but this was in error because the well has been producing from the open hole all of this time.

Please see the attached C-104s.

Sincerely,

Cherry Hlava
