| CHLAVA | BP America requests permission to directionally drill the subject well to a total depth of approximately 7456 & complete into the Basin Dakota, produce the well to establish a production rate, perform a deliverability test, isolate the DK then complete into the Blanco Mesaverde & commingle production downhole. If terrain allows it is our intent to pre-set the 9 5/8 casing by drilling a surface hole with air/air mist in lieu of drilling mud and the surface casing be cemented with 94.5 cu/ft type I-II, 20% FLYASH, 14.5 PPG, 7.41 gal/sk, 1.61 cf/sk Yield, 80 DEG BHST ready mix cmt. | 4/21/2004 |
| SHAYDEN | The condition of approval concerning pit information is set to assure compliance with OCD Rule 50 on pits. The information required is the same as that required on Form C-144. | 4/22/2004 |
| CHLAVA | If conditions will not allow for pre-set the approved cement program will be followed. | 4/28/2004 |
