Attachments: RE: [EXT] RE: [EXTERNAL] Release Fifield 5 #001. 30-045-08640

Clara,

The remediation plan submitted to the OCD via e-mail on March 5, 2019 for the Fifield 5 1 has been denied due to non-compliance with 19.15.29.11 and 19.15.29.12.

I have attached the previous email correspondence to be included with this denial.

HilCorp will need to provide the following additional information to the OCD within 14 days per 19.15.29.11 (C)

C. Remediation plan requirements. The responsible party must take the following action for any major or minor release containing liquids.

(1) The responsible party must submit a detailed description of proposed remediation measures in accordance with the findings of the site assessment/characterization plan that includes:

- (a) delineation results, including laboratory analysis;
- (b) a scaled sitemap showing release area with horizontal and vertical delineation
- (c) estimated volume of impacted material to be remediated;
- (d) proposed remediation technique; and
- (e) proposed timeline for remediation activities.

Clara,

What is the status of the remediation for the Fifield 5 #001?

Clara,

The release occurred from the BGT and in page 7 of the BGT Closure Plan the most stringent would be followed during closure as assigned.

Good morning Vanessa,

Can you review the ranking that we have come up with for this site and tell me if NMOCD is in agreement? I want to ensure we are going down the right path for our remediation plan...

According to well records maintained by the NM Office of State Engineer, the depth to groundwater is > 100 ft, (based on the closest documented well situated approximately 0.9 miles southwest of the Site). Based on the definition of continuously flowing watercourse the Site would be subject to the > 100 feet groundwater requirements in Table 1 (i.e., Chloride < 20,000 mg/kg; TPH (GRO+DRO) < 1,000 mg/kg; BTEX < 50 mg/kg; benzene < mg/kg).

Thank you,
Clara

Good afternoon Clara,

Please submit HilCorps remedial plan for the referenced release. The release occurred in June of 2017 and does not have an approved remediation plan.

Vanessa, I am currently evaluating remediation options that would be a good fit for this location with minimal land impact due to depths hydrocarbons were present. There is no electricity at this location so this may limit some of our options.

Thank you,
Clara

Hi Vanessa. Attached is a delineation map and screening table. As I mentioned the area isn't super large but some of the impacts are deep. Let me know what you think.

Thank you,
Clara
