13. Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once Testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Elm Ridge Exploration Co. submitted a Sundry Notice dated September 7, 2011 with the past 12 months of pressure monitoring data for this well. The data currently show both casing and tubing pressure to be 0 psi. This is not unexpected, as the static fluid level in the wellbore has continued to rise over time, until finally reaching a point of equilibrium with the reservoir pressure. Henceforth, an Echometer will be used to determine static fluid levels, allowing us to calculate the bottom-hole pressures. The first test was run on September 15, 2011, and the fluid level was found to be at 1585'. This equates with a bottom-hole pressure of 1558 psi. Recording this data over time will be essential in assessing our future development plans along this trend. As such, we request permission to continue using this well for pressure monitoring. For the next annual report of pressure data, we will include tubing and casing pressures, as well as calculated bottom-hole pressures from monthly Echometer tests.

14. I hereby certify that the foregoing is true and correct
