OIL CONS. DIV.

DIST. 3

Describe Cause of Problem and Remedial Action Taken.*

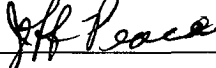

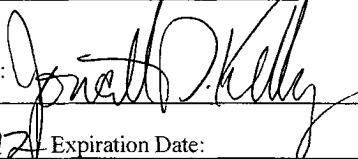

BP construction crew was conducting site equipment removal of 21 bbl BGT on January 9, 2012 when during confirmation sampling beneath BGT, impacted soils were discovered. A test hole was advanced to 8½ feet below grade where bedrock sandstone was encountered. A soil sample was collected and the test hole backfilled with the advanced soils. BP plans to address clean up of the soils after receipt of laboratory analyses for BTEX (benzene, toluene, ethylbenzene, & total xylenes per US EPA Method 8021B), TPH (Total Petroleum Hydrocarbons per US EPA Method 8015B), and chloride (per US EPA Method 300.0).

Describe Area Affected and Cleanup Action Taken.*

Area affected appears to be historical in nature and directly below BGT to a depth of approximately 8½ feet below grade (areal dimensions estimated at 20 ft. X 20 ft.). Clean up action will be addressed in accordance with the New Mexico Oil Conservation Division's (NMOCD) Guidelines for Remediation of Leaks, Spills, and Releases.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
