Was a Water	course Read	ched?	Yes ⊠] No	If YES, Volume Impacting the Watercourse. OIL CONS. DIV.					
If a Watercourse was Impacted, Describe Fully.*					DIST. 3			ST. 3		
This occurred due to losing the supply gas to the pump house, causing the heater to go out and the valve on the discharge side of the transfer pump to break. Upon discovery, the transfer pump was isolated, preventing further overflow from the tank. Describe Area Affected and Cleanup Action Taken.* All of the spilled fluids were contained within the berm. Initially the fluids were frozen inside the berm, and none could be recovered. When the fluids thawed, all were recovered, including 5 BBL of snow melt. The valve has been replaced, the fuel gas thawed out, and the heater relit. For remediation, the affected soils will be raked to promote rehabilitation, and will be evaluated for any further remediation (excavation) if needed.										
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
