13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleate horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleation in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the final site is ready for final inspection.)

Engen Resources intends to plug off the recently added Pictured Cliffs zone and return the Mesaverde Production. Earlier this year, the PC was added to production, and despite all efforts, there is marginal gas production with excessive water production. Therefore, the plan is to TIH w/ a packer on tbg to establish injection into the PC (The CBP is still in the hole isolating the MV). Then, TIH with cmt retainer to 50' above the top PC perf. Once the CR is set, squeeze off roughly 100 sx of either Class 3 or Type G cement into the perforations. WOC. Drill out CR and cmt, then pressure test and chart to 600 psi for 30 min. If test is good, Drill out the CBP and clean out to PBTd. Return MV to production.
