### Gas Measurement Allocation Procedure for Single Well Pads

\*Meter will only be installed and active when gas lift is installed.

**Base Data:**

- V = Gas Volume (MCF) from Custody Transfer Meter during allocation period (Enterprise Product Partners)
- R = Gas Volume (MCF) from Gas Return Meter (Encana)\*
- W<sub>1</sub> = Gas Volume (MCF) from Wellhead Allocation Meter at individual wells during allocation period. (Encana)
- WI<sub>1</sub> = Gas Volume (MCF) from Well Injection Meter at individual wells during allocation period. (Encana)\*
- Y = Heating Value (BTU/scf) from Custody Transfer Meter during allocation period. (Enterprise Product Partners)
- Z = Heating Value (BTU/scf) from individual Wellhead Allocation Meter and Well Injection Meter. (Encana)

Allocation Period is typically a calendar month and will be the same for all individual wells.

Encana Oil & Gas (USA) Inc.  
Good Times Trunk #1 Gathering System  
San Juan County, New Mexico

**Individual Well Gas Production** = A + B + C + D + E

A = Allocated Gas production off lease, MCF:  $[(W_1-R_1)/((W_1-R_1)+(W_2-R_2)+(W_n-R_n))]*(V)$

B = On lease fuel usage, MCF. Determined from equipment specification and operating conditions. This includes, but is not limited to, compression, vapor recovery unit (VRU) compression, burners, and pump jacks.

C = Lost and/or vented gas from well and/or lease equipment, MCF. Calculated using equipment and piping specifications and operating pressures.

D = Allocated fuel from gathering system equipment, MCF. The total fuel required to operate gathering system equipment will be allocated to the individual wells benefiting from the equipment using allocation factors determined by  $[(W_1-R_1)/((W_1-R_1)+(W_2-R_2)+(W_n-R_n))]$ .

E = Allocated volume of gas lost and/or vented from the gathering system, gathering system equipment, condensate collection, and water collection in MCF. The total volume will be determined using industry accepted procedures the time of the loss. The total volumes lost and/or vented will be allocated to the individual wells affected using factors determined  $[(W_1-R_1)/((W_1-R_1)+(W_2-R_2)+(W_n-R_n))]$ .

**Individual Well BTU's** =  $[(W_n-R_n)*Z_n]/SUM((W_n-R_n)*Z_n)*Y$

Individual well gas heating values to be determined in accordance with BLM regulations.

IN REPLY REFER TO:

### **CONDITIONS OF APPROVAL FOR GAS LIFT & BUY BACK METER INSTALLATIONS:**

- The buy-back meter isolation valve, either up or down stream of the buy-back meter must be effectively sealed in the closed position to prevent produced gas from potentially by-passing the measurement and sales meter. In lieu of the seal requirement at least two check valves can be installed in line with the buy-back meter to prevent produced gas from potentially by-passing the measurement and sales meter.

Contact this office so a BLM witness verify installation of either the seal or check valves.

- If seals are installed, seal records must be maintained and made available upon request.
  - Post a Facility sign that **Clearly identify both the sales and by-back meters.**
