Form C-144  
Revised June 6, 2013

For temporary pits, below-grade tanks, and multi-well fluid management pits, submit to the appropriate NMOCD District Office.  
For permanent pits submit to the Santa Fe Environmental Bureau office and provide a copy to the appropriate NMOCD District Office.

Pit, Below-Grade Tank, or  
Proposed Alternative Method Permit or Closure Plan Application

ROAD SEP 4 2014

12183  
45-35491

- Type of action:
- Below grade tank registration
  - Permit of a pit or proposed alternative method
  - Closure of a pit, below-grade tank, or proposed alternative method
  - Modification to an existing permit/or registration
  - Closure plan only submitted for an existing permitted or non-permitted pit, below-grade tank, or proposed alternative method

OIL CONSERV. DIV.

DIST. 9

**Instructions: Please submit one application (Form C-144) per individual pit, below-grade tank or alternative request**

Please be advised that approval of this request does not relieve the operator of liability should operations result in pollution of surface water, ground water or the environment. Nor does approval relieve the operator of its responsibility to comply with any other applicable governmental authority's rules, regulations or ordinances.

**WPX Energy Production, LLC**  
**San Juan Basin: New Mexico Assets**  
*Modification of Chaco 2408-32P 115H*  
*Temporary Pit In-place Closure Plan*  
*(Groundwater over 100 feet below bottom of pit liner)*

In accordance with Rule 19.15.17.16.E NMAC WPX Energy is requesting the following modification to the reference Temporary Pit Permit. This modification is an adjustment of in place closure method specified in the Closure Plan. This modification is a variance to Rule 19.15.17.13.D, but is consistent with the closure requirements prior to rule amendments adopted on June 28<sup>th</sup>, 2013.

**Original Closure Plan:**

- D. WPX closures where wastes are destined for burial in place...
- (8) Upon achieving all applicable waste stabilization in the temporary pit or transfer of stabilized wastes to the temporary pit or burial trench, WPX will:
- (a) fold the outer edges of the trench liner to overlap the waste material in the trench prior to the installation of the geomembrane cover;
- (b) install a geomembrane cover over the waste material in the lined trench or temporary pit; the operator shall install the geomembrane cover in a manner that prevents the collection of infiltration water in the lined trench or temporary pit and on the geomembrane cover after the soil cover is in place; the geomembrane cover shall consist of a 20-mil string reinforced LLDPE liner or equivalent cover that the appropriate division district office approves; the geomembrane cover shall be composed of an impervious, synthetic material that is resistant to petroleum hydrocarbons, salts and acidic and alkaline solutions; cover compatibility shall comply with EPA SW-846 Method 9090A;
- (c) cover the pit/trench with non-waste containing, uncontaminated, earthen materials and construct a soil cover prescribed by the division in Paragraph (3) of Subsection H of 19.15.17.13 NMAC.

The following criteria were used for the original closure plan of the Chaco 2408-32P #115H, Table 1 and Table 2:

**Modification of Closure Plan:**

The pit liner shall be removed above “mud level” after stabilization. Removal of the liner will consist of manually or mechanically cutting the liner at the mud level and removing all remaining liner. Care will be taken to remove “all” of the liner (I.e. anchored material). All excessive liner will be disposed of at a licensed disposal facility (probably San Juan Regional Landfill operated by Waste Management under NMED Permit SWM-052426).

**Temporary Pit In-place Closure Variance:**

The in-place closure method requested in this modification is intended to provide equal or better protection of fresh water, public health and the environment as required per 19.15.17.15.A(3) This method would use the 2008 pit rule closure criteria for soils beneath below grade tanks, drying pads associated with closed-loop systems and pits where contents are removed (Table 1) and closure criteria for burial tranches and waste left in place in temporary pits. These criteria are more stringent than the current rule, providing better fresh water, public health, and environmental protection. In addition, this variance would allow the operator more flexibility to meet Bureau of Land Management reclamation plan requirements and to meet NMOCD compliance by reducing the likelihood of tearing the liner upon reclamation.
