12. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent date, including estimated date of starting any proposed work) SEE RULE 1103.

Benson-Montin-Greer Drilling proposes to run cased hole Neutron/Gamma Ray and CBL Logs from TD to above the Ojo Alamos (3750'-+/-3200'). Based on these logs the Fruitland Coal and Pictured Cliffs will be perforated gross intervals from 3370' to 3550' and then at a later date fracture stimulated.

Actual specifics of the perforated intervals and stimulation design will be determined after interpretation of the cased hole logs. Poor hole conditions made it impossible to run open hole wireline logs. All depths referred to are correlations based on offset well control

I hereby certify that the information above is true and complete to the best of my knowledge and belief.
