Describe Cause of Problem and Remedial Action Taken.* Below Grade Tank Replacement Activities		
Describe Area Affected and Cleanup Action Taken.* The below grade tank sample results were above regulatory standards by USEPA method 418.1 for TPH confirming a release. The excavation was 16' x 16' x 2' and 19 cubic yards of soil was transported to a third party landfarm. Excavation and confirmation sampling occurred. Field results for TPH were below the regulatory standards set forth in the NMOCD Guidelines for Remediation of Leaks, Spills and Release; therefore no further action is required. The results are attached for review. The BGT was replaced with the same size tank and placed in the same location.		

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
