Venting☐ Convert to Injection☐ Plug Back☐ Water Disposal

13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

The wellhead pressure on the Chacon Jicarilla D #19 has built up to 1,100 psi due to fracing operations being conducted on Energen's Chacon Jicarilla #602H.

Energen began venting gas on the Chacon Jicarilla D #19 to a flowback tank starting on 10/10/15 in order to relieve this wellhead pressure.

It is anticipated that the wellhead will need to be vented up to two times daily until the wellhead pressure drops down to approximately 250 psi.

The wellhead pressure has been and will continue to be monitored daily, and it is anticipated that it will need to be vented daily until the plugs are drilled out on the Chacon Jicarilla #602H.

Billy Stalcup left a message for Troy Salyers on 10/12/15.

Bryce Hammond with the Jicarilla Oil & Gas was also notified on 10/12/15

A subsequent report will be submitted once these venting operations are no longer necessary.
