**Describe Cause of Problem and Remedial Action Taken.\***

While cleaning up a small spill in the cribbing area of the Huerfano Unit 193 with a hydrovac truck more contamination (and older) was found. Third-party environmental was on location to sample and direct placement of pot holes to help delineate the affected area. The excavation at end of today, is approximately 27 feet x 21 feet and up to 13 feet deep. The base is at what appears to be degraded sandstone, and is below NMOCD Action Levels at about 12-13 feet. The contamination is concentrated on the west end near the separator. The contamination is old with some liner mixed in. It may be the an old earthen or dehy pit.

**Describe Area Affected and Cleanup Action Taken.\***

**ConocoPhillips will continue remediation efforts.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
