13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once Testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

Hilcorp Energy Company plans to recomplete the subject well in the Fruitland Coal formation and downhole commingle the existing Pictured Cliffs with the Fruitland Coal. Attached is the FC plat & recomplete procedure. A DHC application will be filed and approved prior to commingling. A Closed Loop system will be utilized.

### **Fruitland Coal Recompletion Sundry**

**3/1/2018**

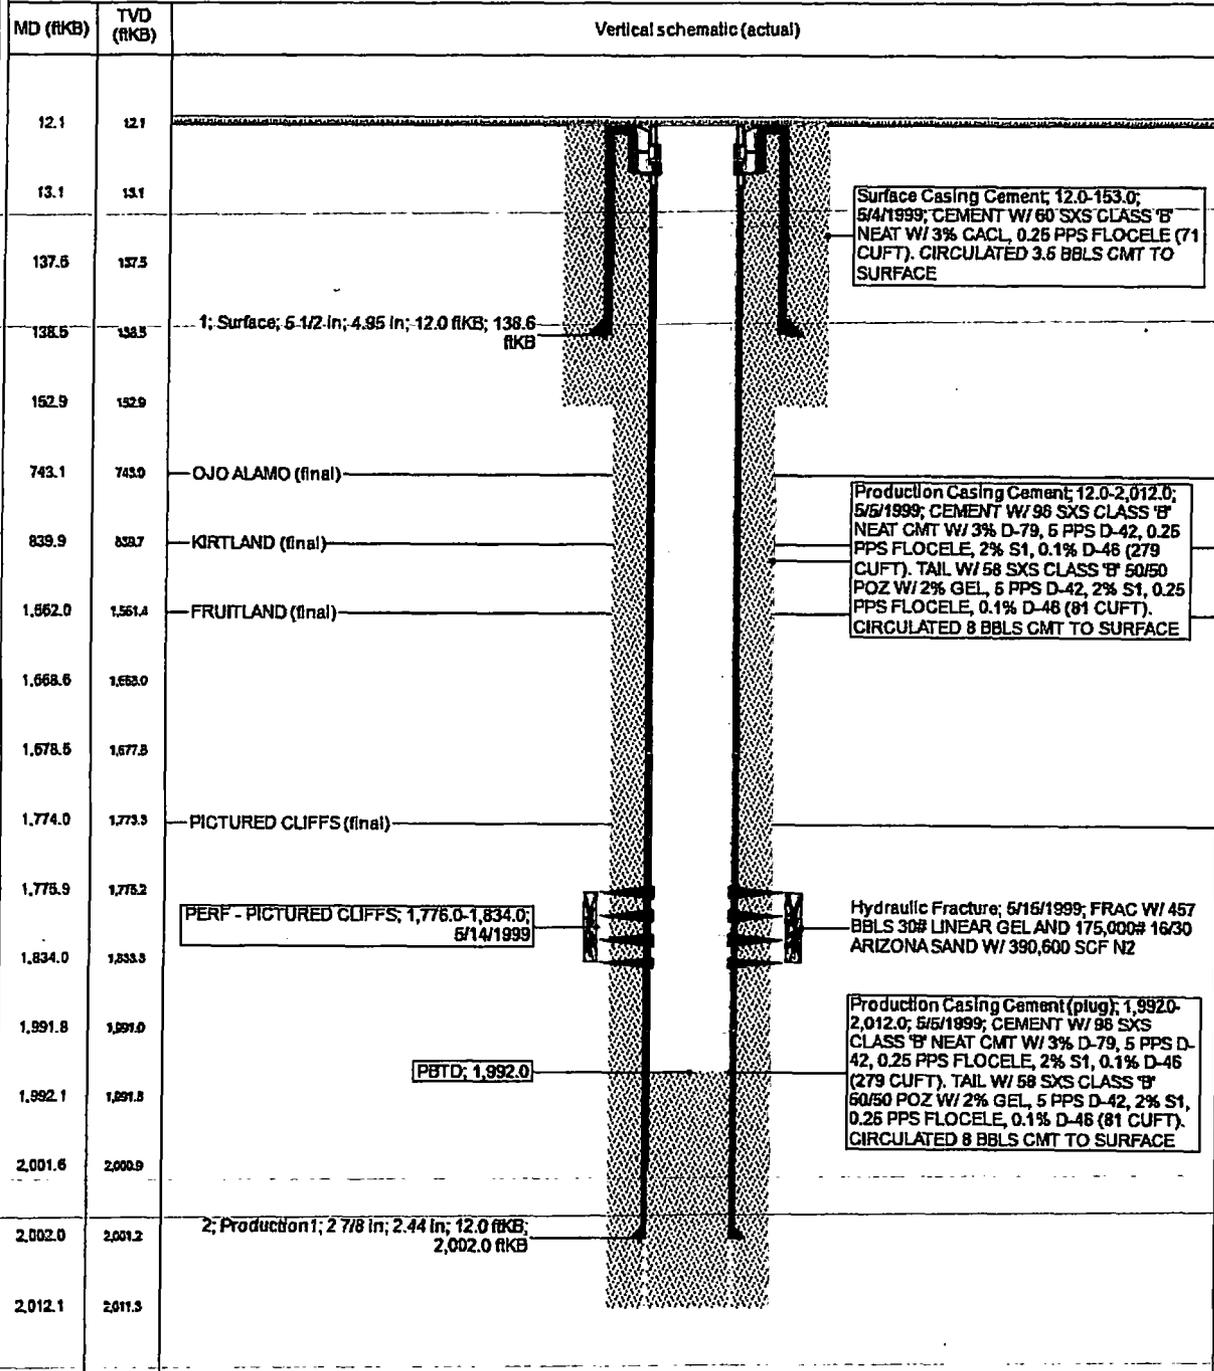

#### **Procedure:**

1. MIRU service rig and associated equipment; NU and test BOP. Note: No production tubing, this is a slimhole PC completion.
2. Run gauge ring and scraper and set a 2 7/8" bridge plug at 1773' (directly above the existing PC completion) to isolate the Pictured Cliffs.
3. Load well and pressure test casing.
4. Cement was circulated to surface. If necessary, run a GR/CCL/CBL correlation log with 500 psi. Logs will be used to pick formation tops, any need for remedial cement work, and other decisions related to the execution of the completion.
5. Install frac head, PT to max treating pressure, and complete the Fruitland Coal formation. Estimated perf interval: 1562' - 1773'
6. Flow back on clean-up to a flow back tank. If necessary for well control purposes, set a composite bridge plug above top perf.
7. TIH and drill out the top composite plug. Flow test the Fruitland Coal up the casing.
8. Drill out the bridge plug set above the Pictured Cliffs and cleanout to PBTD at 1992'.
9. Get a commingled Fruitland Coal / Pictured Cliffs flow rate.
10. If needed, land production tubing or install artificial lift.
11. Release service rig and turn over to production.
