Final Abandonment Notice shall be filed only after all requirements, including reclamantion, have been completed, and the operator has determined that the site is ready for final inspection.)

On 6/2/2003 operations commenced to re-cavitate the above referenced well. Moved in 24 hr service unit. Pressure test 7" casing to 1500 psi- OK. Attempts to retrieve liner from wellbore were unsuccessful. Upon verbal approval from BLM, sidetrack operations commenced. Set CIBP at 2848' in 7". Set 3 deg whipstock tool on bridge plug and cut window in 7" with top of window at 2828' and bottom of window at 2839'. Drilled new hole to 3167' TD. Surged well naturally and air assisted to remove near wellbore material. Well produced heavy amounts of coal and some sandstone and shale. As work progressed, old liner started falling into new hole. Could not work past old liner so decision was made to stop cleanout operations and land tubing in openhole section. Set 2 3/8" tubing at 2980' (187' off TD) and ran downhole pump and rod string. Moved off location with rig and turned well to sales.
