	<input type="checkbox"/> Altering Casing	<input type="checkbox"/> Conversion to Injection

☒ Other - Temporary produce without tubing

RCVD APR 2 '07  
OIL CONS. DIV.

**13. Describe Proposed or Completed Operations**

DIST. 3

When we perforating the subject well, after the 10<sup>th</sup> shot, our perf gun messed up. While pulling out of the hole with the gun, we encountered a kick in gas and fluid. The well started flowing at a pressure of approximately 2300# and since the pressure was too large to flare and flowback under our conditions in the field we are asking permission to flow the well up the casing producing the gas and condensate without the tubing until such time the pressure drops to safe pressure and we can change out the wellhead and run the tubing.

Verbal approval was given by Troy Salyers with the BLM and Henry V. with the OCD on 3/26/07.

Two (2) valves required on wellhead

14. I hereby certify that the foregoing is true and correct.

Signed Patsy Clugston Title Sr. Regulatory Specialist Date 3/26/07
