13. Describe proposed or completed operations. (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work). SEE RULE 1103. For Multiple Completions: Attach wellbore diagram of proposed completion or recompletion.

D. J. Simmons Company intends to complete and co-mingle the production of the Basin Fruitland Coal with the previously completed Blanco PC. Attached is the procedure and bore diagram, The amended C-102 dated 10/21/05 is on file. Pit is not required for this operation. Production allocation will be accomplished by comparing the new production rate with the historical decline on the existing Blanco PC completion. Estimated start date July 23, 2007. Please approve DJ Simmons, Inc. plans as detailed per attachments.

**Procedure:**

RECEIVED

BLM

210 FARM 1701 NM

- Wireline set a 4 1/2" 10,000psi cast iron bridge plug at 2375'KB+/. Casing collar at 2366'KB. Dump bail 1sx cement on top. Be careful not to get too much cement in this case or we'll have to trip in with bit and dress off to get all the perfs in the right spot. We need to be able to perf at 2364'KB.
- Perforate 4 JSPF 90 degree phase with a minimum 0.38" hole diameter over 2161', 63', 65', 68', 2260', 65', 66', 69'-74', 77', 81'-83', 87'-93', 95', 2303'-05' & 2354'-64' (156 shots).
- Wireline set a drillable 4 1/2" choke plug with 1" diameter choke at 2324'.
- Frac 2161'-2364' with 172,000 gallons clear fresh water (50,000 gallons is pad) and 200,000# 40/60mesh Brady sand at 60 BPM as indicated in the schedule below. **Tag frac with Iridium 192.** We may have several stops and starts during the pad in order to open the cleats.
- Drill out cement and cast iron plug at 2375'KB and clean out to PBTD of 2537'KB.
- Return the well to production with the Fruitland Coal and the Pictured Cliffs commingled.
