BP America Production Company respectfully request authorization to surface commingle gas production from the Basin Dakota coming from Gallegos Canyon Unit 138E API 30-045-26155 & the production from W. Kutz Picture Cliffs coming from our Gallegos Canyon Unit 516 API 30-045-28063. The production from each well will be separated prior to the allocation meter. Then the production from each well will be metered prior to being commingled. The commingled production will then be sent through compression prior to entering the sales meter.

The difference between what is measured prior to commingling and what is sold through the sales meter is the fuel usage. This fuel usage is allocated back to each well based on the well production.

The working interest, royalty and overriding royalty interest owners in the subject wells are different however approval of Order R-12724 on 3-6-2007 allows surface commingling & sharing compression without notification. The proposed commingling of production is to reduce operating expenses between the wells and will result in increased economic life of the wells.
