13. Describe Proposed or Completed Operation (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recompleat horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompleat in a new interval, a Form 3160-4 shall be filed once testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

This well is to be used to develop the already approved East Puerto Chiquito Mancos Unit Tertiary Recovery Project. To proceed with the Polymer Flood of the Niobrara "A" and "B" porosity units, it is necessary to plug off the Sanostee perfs from 3012' to 3018'. We propose to set a CIBP at ±2950, cover with at least 35' neat cement, pressure test to 500 psi for 30 minutes. We then plan to run 2-3/8" EUE 8rd tubing to 2425', set 7" tension packer, pressure annulus to 500 psi, place well in TA status until needed in Polymer Flood. CBL run on 9/30/03 shows cement top at 2680' behind 5-1/2" liner.
