13. Describe Proposed or Completed Operation: Clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomplete horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No. on file with BLM/BIA. Required subsequent reports must be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 must be filed once testing has been completed. Final Abandonment Notices must be filed only after all requirements, including reclamation, have been completed and the operator has determined that the site is ready for final inspection.)

On February 29, 2008 Robert L. Bayless, Producer LLC repaired the casing on the Bimson Federal 1. The casing leak was isolated between 465' and 480' RKB. A retrievable bridge plug was set above the Fruitland Coal perforations at 1706' RKB. A packer was set at 340' RKB. Circulation was established through the bradenhead valve using water. The annular space was cemented with 140 sx (32.9 bbl) of 14.8 ppg, 1.32 yield Type V cement. Once cement was circulated to surface the bradenhead valve was closed and cement was displaced to leave a 50' plug in the casing. Released packer and tripped out of hole. Tripped back in hole and tagged cement at 405' RKB. Drilled through cement using air. Bottom of cement plug at 472.5' RKB. Charted pressure test at 500 psi for 30 minutes. Retrieved bridge plug, cleaned out wellbore and returned well to production.
