13 Describe Proposed or Completed Operations (clearly state all pertinent details, including estimated starting date of any proposed work and approximate duration thereof. If the proposal is to deepen directionally or recomple horizontally, give subsurface locations and measured and true vertical depths of all pertinent markers and zones. Attach the Bond under which the work will be performed or provide the Bond No on file with BLM/BIA. Required subsequent reports shall be filed within 30 days following completion of the involved operations. If the operation results in a multiple completion or recompletion in a new interval, a Form 3160-4 shall be filed once Testing has been completed. Final Abandonment Notices shall be filed only after all requirements, including reclamation, have been completed, and the operator has determined that the site is ready for final inspection.)

Elm Ridge Exploration has reached TD of 6015' on the above well as of 4-24-08. 4-24-08 We Ran 142 joints of 5 1/2" J-55 15.5# Casing down a 7 7/8" hole to 6007'. First cement stage as follows on 4-25-08; 390 sks of 50/50/G/poz cement with 20 bbls of good cement to surface, we circulated for 8 hours between stages and held safety meeting. Stage two as follows on 4-26-08; 554 sks of 65/35/G/POZ no cement to surface. We anticipate that there is adequate cement inside the surface casing by the mud flush returns. We wont know for sure until we move on to complete the well and run a CBL at that time. In the past Stephen Mason has said that if there is adequate cement in the casing there is no need to bring it to surface. Tested well to 1500 PSI for 30 plus minutes, notified but not present for job.
