Good morning ~

I received a C-104 for the above captioned well today, and in reviewing the well file for this well I am unable to locate a drilling pit permit. Could you please provide me with an approved copy for this well so that I can update our file?

Also, in reviewing the gyro survey submitted, Steve has determined the bottom hole location of this well is non-standard and will require NSL approval from Santa Fe prior to producing. Please insure this well remains shut in until such approval is obtained, and the C-104 is approved.

Thank you.

Karen Sharp
