For temporary pits, closed-loop systems, and below-grade tanks, submit to the appropriate NMOCD District Office. For permanent pits and exceptions submit to the Santa Fe Environmental Bureau office and provide a copy to the appropriate NMOCD District Office.

Pit, Closed-Loop System, Below-Grade Tank, or Proposed Alternative Method Permit or Closure Plan Application

X Permit of a pit, closed-loop system, below-grade tank, or proposed alternative method Closure of a pit, closed-loop system, below-grade tank, or proposed alternative method Type of action:

Instructions: Please submit one application (Form C-144) per individual pit, closed-loop system, below-grade tank or alternative request

Please be advised that approval of this request does not relieve theoperator of liability should operations result in pollution of surface water, ground water or the

environment. Nor does approval relieve the operator of its responsibility to com	ply with any other applicable governmental authority's rules, regulations or ordinances.

ADMINISTRATIVE APPROVAL REQUEST

RE: Navajo 20-6-5 #2 Temporary Drilling Pit Design

SGI is requesting administrative approval for the current pit design as applied for and approved by BLM and NMOCD under the current Federal APD. This design was applied for prior to the new pit rule effective date but was approved post effective date.

The design submitted is the same design used to drill all previous wells in this area without incident negatively affecting the Environment, the Health and Welfare of the surrounding residents, and the employees and contractors of SGI.

The request is for a variance concerning the rise to run slope of the pit walls. The current pit was designed with a 2' rise to 1' run in order to reduce the footprint of the drilling pad as requested by the BLM. All other new temporary drilling pit design criteria will be followed.

A 10'W x 10'H x 75'L pit with 1'H:2'V walls has a 2,271 Bbl capacity full. Subtracting a 2' freeboard there is a 1,676 Bbl capacity. This is 678 Bbls or 68% additional capacity of the 1000 Bbls needed to drill this well.

To address the issue of egress from the pit in case of an accidental ingress, a rope ladder will be installed. The rope ladder will be anchored at the surface outside the pit liner anchor ditch and will extend to the bottom of the pit. This will allow any personnel to escape from the pit. Please note: In the several years we have worked in the industry (30+ years) we have never seen or heard of any accidental fatalities concerning drowning in reserve pits.

THE NAVAJO 20-4-5" 2 IS NOT LOCATED WITHIN 300' OF A FLOWING WATER COURSE OR 200' OF ANY DRY WATER COURSE.

THERE ARE NO BUILDINGS WITH IN 1000' OF THIS LOCATION.

Wetlands Certification

RE: Navajo 20-6-5 #2

I <u>William Schwab III</u> certify that I have visually inspected the above well and that there are no wetlands with in a 500 foot radius.\

There is no data available from the US Fish and Wildlife identification map (attached) as to the existence of a wetland.

Signature

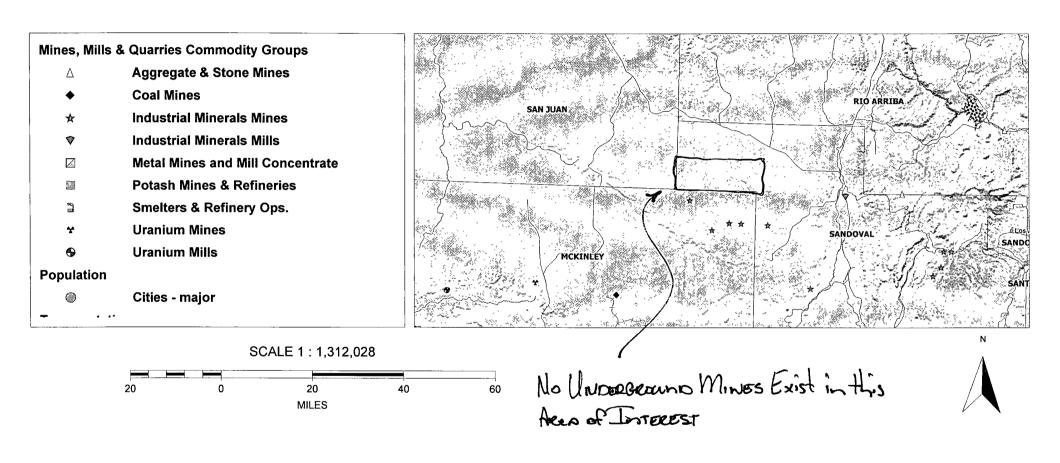

Date: 9/9/2008

Unstable Area

RE: Navajo 20-6-5 #2

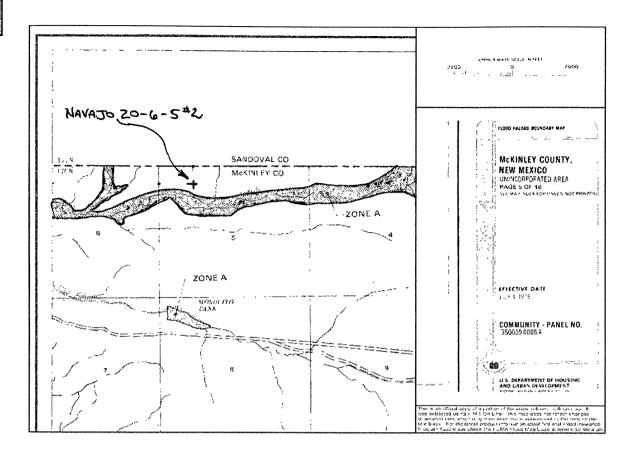

The well pad is not located near any surface mines or over any subsurface mines. The Soil consists of a clay sand mixture. The location has a 10' cut and a 10' fill. The temporary drilling pit will be located in the cut of the cut side of the location.

MMQonline Public Version

THE NAVAJO 20-6-5 #2 IS NOT LOCATED IN THE 100 YEAR PLOODPLAIN.

- 100 YEAR FLOODPLAIN

Hydrogeology Report for the Navajo 20-6-5 #2

The Navajo 20-6-5 #2 located in Sandoval County, is in the upper southeastern reaches of the San Juan River drainage basin. The surface is covered by Quaternary alluvium consisting of unconsolidated sand, gravel, silt, clay, terrace gravel and boulder deposits. The alluvium itself is not a source for ground water. The consolidated rock outcrops along the drainage are the Tertiary Age Paleocene Nacimiento Formation which underlies the alluvium. The Nacimiento Formation is a stratified fluvial sand and shale sequence less than 200 feet thick.

The aquifer in this area of the San Juan Basin primarily consists of the Ojo Alamo Sandstone. The top of the Ojo Alamo at this drill site is estimated to be approximately 275 feet below the surface. The Ojo Alamo is a permeable conglomerate and medium to very coarse sandstone interlayered with relatively impermeable shale. This aquifer contains fresh to moderately saline water. Dissolved-solids concentrations generally increase along the groundwater flow path from less than 1,000 milligrams per liter near recharge areas to about 4,000 as the formation is deeper into the basin.

The proposed well, Navajo 20-6-5 #2, is located in the NWNW quarter-quarter of section 5 T20N- R6W. No groundwater wells were identified in this section using the iWaters Database from the Office of the State Engineers. There are groundwater wells in Sections 11 and 32 of T20N and R6W.

SG Interests I, Ltd.

Temporary Pit Design & Construction Plan

Re: Navajo 20-6-5 #2

- 1 SG Interests will design and construct a temporary pit to contain liquids, solids, prevent contamination of fresh water, and protect public health and environment.
- 2 Prior to constructing the pit, topsoil will be stockpiled per APD for later use in reclamation.
- 3 SGI will have sign on location in compliance with 19.15.3.103 NMAC.
- 4 SGI shall construct all new fences utilizing 48" hog wire on bottom with a single strand of barbed wire on top. T-posts will be installed a minimum of every 12 feet and corners will be braced. Temporary pits will be fenced at all times except during drilling or workover operations when the rig side of the fence will be temporarily removed for operational purposes.
- 5 SGI shall construct the temporary pit so the foundation and interior slopes are compact, free of rocks, debris, sharp edges and irregularities to prevent liner failure.
- 6 SGI shall construct the pit so the slopes are no steeper than two horizontal feet to one vertical foot. Any other design will be submitted for administrative approval. The Navajo 20-6-5 #2 has submitted for administrative approval a slope of one horizontal foot to two vertical feet.
- 7 All temporary pits will be lined with a 20 mil string reinforced, LLDPE liner, complying with EPA SW-846 method 9090A requirements.
- 8 Geotextile will be installed beneath the liner if integrity will be compromised from sharp edges or irregularities.
- 9 Liner will be anchored in the bottom of a compacted earth filled trench at least eighteen inches deep.
- 10 Liner seams will be minimized and oriented up and down, not cross slope. Factory seams will be used wherever possible. Field seams will be overlapped four to six inches and welded by qualified personnel. Seams will be minimized in corners and irregularly shaped areas.
- 11 The liner shall be protected from any fluid force through the use of mud pit slides or a manifold system.
- 12 Diversion ditches and berms will be used to prevent natural runoff from entering pit.
- 13 Pit volume will not exceed 10 acre feet, including freeboard.
- 14 Temporary blow pits will be constructed to allow fluid discharged to unlined pit, as allowed by Rule 19.15.17.11.F.11, to gravity flow into lined pit.
- 15 Freestanding liquids will not be allowed in unlined portion of a temporary blow pit.

Pit to be lined with 20 mil LLDPE Material

Liner will be anchored in anchor ditch

SG Interests I, Ltd.

Temporary Pit - Maintenance & Operating Plan

Re: Navajo 20-6-5 #2

- 1 SG Interests will design and construct a temporary pit to contain liquids, solids, prevent contamination of fresh water, and protect public health and environment.
- 2 SGI will dispose of drilling fluids at Basin Disposal Inc., Permit # NM-01-005.
- 3 SGI will not dispose of or store any hazardous waste in any temporary pit.
- 4 If the pit liner's integrity is compromised, or if any penetration of the liner occurs above the liquid surface, the NMOCD Aztec Division office will be notified by phone or e-mail within forty eight hours.
- 5 If a leak develops below the liquid level SGI shall remove all liquids above the damaged liner within forty eight hours and repair the damage to the liner. For leaks less than 25 Bbls SGI shall notify the NMOCD Aztec office within forty eight hours of the discovery. For leaks greater than 25 Bbls SGI shall notify the NMOCD Aztec office within twenty four hours of the discovery. In addition verbal notification shall be given to the divisions Environmental Bureau Chief.
- 6 The liner shall be protected from any fluid force through the use of mud pit slides or a manifold system.
- 7 Diversion ditches and berms will be used to prevent natural runoff from entering pit.
- 8 SGI shall immediately remove any visible layer of oil from the surface of the temporary pit. An oil absorbent boom will be used to contain and remove oil from the pits surface. An oil absorbent boom will be kept on-site until closure of pit.
- 9 Only fluids generated during the drilling or completion process will be discharged into a temporary pit.
- 10 The pit will be kept free of miscellaneous solid waste and or debris.
- 11 During drilling or completion operations, SGI will inspect the temporary pit at least once daily to insure compliance with this plan. Inspections will be logged in the IADC reports and SGI daily drilling reports. These reports will be filed with the NMOCD Aztec Division office upon closure of the pit.
- 12 After drilling or completion operations, SGI will inspect the temporary pit at least once weekly so long as liquids are present in the pit. Inspections will be logged as a continuation of the SGI daily drilling report and will be filed with the NMOCD Aztec Division office upon closure of the pit.
- 13 The temporary pit shall always maintain a minimum of two feet of freeboard.
- 14 Freestanding liquids will be removed from a temporary pit within 30 days from the date the drilling rig is released and removed as needed thereafter until the pit is closed.
- 15 SGI will remove all freestanding liquids from a cavitation pit within 48 hours after completing a cavitation. SGI may request additional time to remove liquids from the NMOCD Aztec Division office if SGI is not able to remove liquids in 48 hours.

SG Interests I, Ltd.

Temporary Pit - Closure Plan

Re: Navajo 20-6-5 #2

All closure activities will include proper documentation and be available for review upon request and will be submitted to the NMOCD Aztec Division office within 60 days of pit closure. Closure report will be filed on form C-144 and incorporate the following:

Details on capping and covering (where applicable)
Plot Plan (Pit Diagram)
Inspection Reports
Sampling Results
C-105
Copy of Deed Notice filed with County Clerk

- 1 All freestanding liquids will be removed at the start of the pit closure process from the pit and disposed of in a division approved facility or recycle, re-use or reclaim the liquids in a manner that the appropriate division district office approves. SGI plans to dispose of drilling fluids at Basin Disposal Inc., Permit # NM-01-005, unless otherwise noted.
- 2 The method of closure for all temporary pits will be on-site burial as long as all the criteria listed in sub-section B of 19.15.17.13 NMAC are met.
- 3 The surface owner shall be notified of SGI closure plan using a means that provides proof of notice i.e., certified mail, return receipt requested or electronic mail with read receipt.
- 4 Temporary pits will be closed, re-contoured, and re-seeded 6 months after drilling rig is released.
- 5 "Notice of Closure" will be given to the NMOCD Aztec Division office within 72 hours of closure via electronic mail or verbally. The "Notification of Closure" will include:
 - i. Operators Name
 - ii. Location by Unit Letter, Section, Township, and Range
 - iii. Well Name and API number.
- 6 A five point composite sample will be taken of the pit using sampling tools and tested per 19.15.17.13.B.1.b. NMAC. Maximum limits for on-site burial are listed below:

Components	Test Method	Limit (mg/kg)
Benzene	EPA SW-846 8021B or 8260B	0.2
BTEX	EPA SW 846 8021B or 8260B	50
TPH	EPA SW 846 418.1	2500
GRO/DRO	EPA SW 846 8015M	500
Chlorides	EPA 300.1	1000

In the event the criteria are not met all contents and remediation will be handled per 19.15.17.13.B.1 NMAC. If ground water is 50'-100' below the bottom of the buried waste all limits are the same except the chloride limit is reduced to 500 mg/kg.

The sampling can be taken prior to mixing but if the contents exceed the parameters then contents must be sampled after mixing and meet the criteria before closure.

- 7 Pit contents shall be mixed with non waste containing earth material in order to achieve the solidification process. The solidification process will be accomplished using a combination of natural drying and mechanical mixing. Pit contents will be mixed with non waste, earth material to a consistency that is deemed safe and stable. The mixing ratio shall not exceed 3 parts clean soil to 1 part pit contents.
- 8 Liner of temporary pit will be removed above "mud level" after stabilization. Liner will be cut and all excessive liner will be removed and taken to a licensed disposal facility.
- 9 Upon completion of solidification and satisfactory test results the pit area will be backfilled and compacted with non-waste earth material. A minimum of four feet of cover with the top foot (or background thickness of topsoil whichever is greater) suitable to establish vegetation at the site.
- 10 The pit cover will be re-contoured and re-vegetated complying with subsections G,H,&I of 19.15.17.13 NMAC.
- 11 Notification will be sent to NMOCD Aztec Division office when reseeding is completed.
- 12 SGI will seed the disturbed areas the first growing season after the operator closes the pit. Seeding will be accomplished by drilling on the contour whenever practical or by other division approved methods. APD stipulated seed mixes will be used on Federal lands. Vegetative cover will equal 70% of the native perennial vegetative cover (unimpacted) consisting of at least three native plant species, including at least one grass, but not including noxious weeds. Seed cover will be maintained thru two consecutive growing seasons. Repeat seeding or planting will be continued until successive vegetative growth occurs.
- 13 The closed temporary pit will have a steel marker no less than four inches in diameter, extending four feet above mean ground level, extending and cemented in a hole three feet deep, in the center of the onsite burial upon completion of the closing. The marker will be permanently welded, stamped or engraved to include the operator name, lease name, well name and number, unit number, section, township, range, and indicator that the marker is an onsite burial location. SGI reserves the right to install a temporary flat plate marker, one foot by two feet, with the same information if it is deemed necessary for safe operation on the wellsite during the productive life of the well. A full size marker will then be installed upon final abandonment.

RE: Navajo 20-6-5 #2, API # 30-031-21100

Jim.

This is a follow up certified letter as per the requirements of the new OCD pit rule 17 requiring notification to the surface owner that we are planning to open, use and close a temporary drilling pit on the subject location. After drilling operations cease, SGI plans to close the temporary pit per the approved APD and the new NMOCD rules.

Please let me know if you have any questions.

Thank you for your time.

Jim,

The requirements of the new OCD pit rule 17 requires notification to the surface owner that we are planning to open, use and close a temporary drilling pit on the subject location.

SGI plans to construct and close the temporary pit per approved DOI-BLM APD and NMOCD rules.

Please let me know if you have any questions.

Thank you for your time,

Tripp Schwab Nika Energy Operating Agent for SG Interests I, Ltd. 970-259-2701 off 970-385-1598 fax

PS It was good talking to you today. I will be praying for you for the next several months, with all you have on your plate.
