13. Describe Proposed or Completed Operations (Clearly state all pertinent details, and give pertinent dates, including estimated date of starting any proposed work. If well is directionally drilled, give subsurface locations and measured and true vertical depths for all markers and zones pertinent to this work.)*

- i. Pre-approved Pool Division Order R-11363.
- ii. Pools to be commingled: Blanco MV 72319, Basin Dakota 71599.
- iii. Perforated intervals: Blanco MV 5093' - 5762', Basin Dakota 7842' - 7940'.
- iv. Fixed percentage allocation based upon production data of 40.9% Blanco MV and 59.1% Basin Dakota. See attached information for details. This allocation may be adjusted at a later date based on further testing.
- v. Commingling will not reduce the value of reserves.
- vi. Notification of working, royalty, and overriding royalty interest owners; no notice is required per R-12991.
- vii. The State has been notified and has approved the work on sundry notice form C-103, approval code DHC 3161AZ.

EXPLORATION & PRODUCTION

COMMUNICATION REPAIR & COMMINGLING PROCEDURE

ROSA #32B
T31N, R6W, SECT. 21
ELEVATION: 6320' GR
TD: 7989' MD

WELLBORE STATUS:

DK 2-1/16", 3.3 #/FT, TO 7931' MD

5-1/2" ARROW MODEL B PACKER @ 6100' MD

MV 2-1/16", 3.3 #/FT, TO 5753' MD

ESTIMATED DK SIBHP = 350± PSIG

ESTIMATED MV SIBHP = 165± PSIG

ESTIMATED DK SIBHT = 210± °F

ESTIMATED MV SIBHT = 165± °F

OBJECTIVE: Remove failed packer and commingle MV and DK

- 1) MIRU, kill, ND tree, & NU BOP's.
- 2) POOH with tubing on both strings.
- 3) Mill out packer.
- 4) Clean out fill to PBTD @ 7967' MD.
- 5) RIH with 2-3/8 and hang-off commingled string @ ~7900' MD.
- 6) ND BOP's & NU tree.
- 7) Test well to make certain tubing is not plugged.
- 8) Release rig.
- 9) Return to production.

PRIOR TO PRIMARY JOB

- 1) Test rig anchors.
- 2) Verify location is OK for rig operations.
- 3) Ensure JSA, ECP's and lockout procedures are in place for the flowline and other energized piping or equipment.
- 4) Acquire 8000' of 2-3/8" N-80 or stronger work string.
- 5) Acquire ~7900' of 2-3/8", eue, 8rd, 6.5 #/ft J-55 tubing.
- 6) Locate and have on standby 300' of 2-1/16" 3.25 #/ft, tubing.
- 7) Acquire wellhead and convert from dual tubing string to a single, 2-3/8" tubing string.
- 8) Acquire 2-3/8", I.D. Type X or XN type nipple.
- 9) **KCL** on location to treat kill water as needed.

SAFETY NOTICE

PERSONNEL SAFETY IS THE NUMBER ONE JOB.
NO EXCEPTIONS!!!
PLEASE FOLLOW APPROPRIATE WILLIAMS CONTRACTOR
PROTOCOLS FOR THIS JOB PLAN

Please see your Williams Business Representative if you have any questions; Contractor protocols can be located in the Williams E&P Contractor Guide

COMMUNICATION REPAIR & COMMINGLING PROCEDURE

ROSA #32B DK AND MV

PRIMARY JOB

Note: Safety meetings shall be held each morning before work and subsequent "tailgate" safety meetings are to be held during the day when operation objectives shift in nature and intent (i.e. beginning/ending fishing operations, squeeze jobs, rigging down, perforating, etc.) Please ensure these are documented per section 2.2.7 of the Williams E&P Contractor Guide

1. MI and spot equipment to include fluid pumps and tanks.
2. MIRU.
3. ND/NU killing well with KCL water as necessary

4. Test the BOP's to 2500 psig minimum. If they fail, then rebuild and retest. If they cannot pass tests DO NOT PROCEED and notify Production Engineer.
5. Pick up on DK long string to determine if the long string will pull.
6. If long string will POOH from step #5 above, then POOH with MV short string and proceed to step # 7. If the long string will not POOH, proceed with sub-steps 6.1 through 6.3 below:
 - 6.1. POOH with short string one or two joints to confirm ability to move.
 - 6.2. Pick up additional joints of 2-1/16" pipe and wash to top of packer at 6100' using heavy air mist. Wash as necessary until returns clean up to approximately ¼ cup of sand in 5 gallons of water returns.
 - 6.3. After returns clean up, POOH with pipe laying down string.
7. Spear or screw in and POOH with 2-1/16" 3.3 #/ft DK (long string) string using straight pull to pull out of Arrow Model B packer seal assembly up to 40,000 #'s.
8. POOH with lay down tubing (243± jts. 2-1/16" 3.3# J-55) and seal assembly.
9. NU additional pipe ram for work string or replace pipe ram with annular preventer.
10. Pick up work string.
11. Pick up Arrow Model B packer millover & pulling tool, using DC's and assembly as necessary and RIH on work string to mill over Arrow Model B packer @ 6100' MD and RIH on work string. If work string not inspected prior to work do not exceed 70% of joint strength of the work string pipe when pulling.
12. Millover and attempt to pluck Arrow Model B packer at 6100' MD. If using 4.7 #/ft work string, weight of dry string above packer is 28.7k #s. If using 6.5 #/ft work string, dry string weight will be 39.7k #'s. When attempting to pull packer and tail pipe determine work string weight and do not pull more than 70% of joint strength.
13. POOH with packer and lay down work string, tools and packer.
14. RIH workstring.
15. Clean out to 7967' PBTD, TOOH
16. RIH with mule shoe, 2.3" minimum ID X nipple, TBG hang off EOT at 7900'
17. N/D BOP's and N/U wellhead.
18. Return well to production.
19. R/D, move off location.
20. Notify pumper on route to place well on test.

**Production Allocation Recommendation
ROSA UNIT #32B
BLANCO MV/BASIN DK**

| | | | |
|------------------|------------------------------------|----------------|--------------|
| WELLNAME: | Rosa Unit #32B | FIELD: | San Juan |
| LOCATION: | SW/4 NE/4 Section 21(G), T31N, R6W | COUNTY: | Rio Arriba |
| API No.: | 30-039- 26771 | Date: | May 11, 2009 |

Current Status: The Rosa #32B is currently a dual completion well producing from the Dakota and Mesaverde formations. The packer unit at 6100' has failed. Packer repair would be mandatory. The Production Optimization and Enhancement Team recommends commingling this well instead.

Commingle Procedure:

- Mesa Verde tubing will be pulled
- Dakota tubing will be pulled
- Production packer will be removed
- Well will be cleaned out to PSTD
- A single string of 2-3/8" tubing will be run to ~7900'
- One set of wellhead facilities will be removed
- Well will be produced as a MV/DK commingle

Allocation Method: Historic production data from both zones on this well was gathered and analyzed. Monthly production data from January 2005 through January 2009 was considered as this represented a time when both zones appear to be free from loading problems and each zone was producing optimally. During this time the Mesa Verde contributed approximately 40.9% of the total production of the well, while the Dakota accounted for the remaining 59.1% during the same time span.

From January 2005 to January 2009

| | | |
|----------------------------|---|------------|
| Total Production from well | = | 329853 Mcf |
| Total Production from MV | = | 134886 Mcf |
| Total Production from DK | = | 194967 Mcf |

MV allocation = MV production / Total production = 134886 Mcf / 329853 Mcf = 40.9%

DK allocation = DK production / Total production = 194967 Mcf / 329853 Mcf = 59.1%
