If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* **An Aztec Well Services employee discovered a release of approximately 500 BBL of fresh water at the San Juan 28-4 #37M on the morning of 8/27/08 due to a leak in the liner under the mud pit. During rig up and move in, the tires on the rig up truck cut the rig liner, and the tear went undetected. When draining the sand pit, fresh water flowed underneath the liner, causing it to float. Upon discovery, the fresh water flow was stopped and a vacuum truck was brought in to recover the fluids from underneath the liner.**

Describe Area Affected and Cleanup Action Taken.\* **All of the spilled fluids were contained on location, and 480 BBL of fresh water were recovered by vacuum truck and returned to the repaired pit. The liner was patched with sacks of drilling mud. To prevent reoccurrence, COPC will review rig up and move in procedures with contractor.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
