If a Watercourse was Impacted, Describe Fully.\*

Describe Cause of Problem and Remedial Action Taken.\* **A ConocoPhillips employee discovered a spill of approximately 5 BBL of crude oil at the Allen Com 1A on 10/06/08 due to a below grade tank overflow. The tank overflow was the result of an oil dump that was stuck shut, allowing the tank to overflow. Upon discovery, the employee shut down the pumping unit and had a vacuum truck recover oil from around the pit. Approximately 4 BBL of oil was recovered and put back into the tank.**

Describe Area Affected and Cleanup Action Taken.\* **All of the spilled fluids remained on location. The spill impacted soil on the ground surface, in and around the pit. The below grade tank was removed and 5 cubic yards of impacted soil was excavated by CF&M Oilfield Services & taken to Industrial Ecosystems Inc. land farm on 10-13-08. To prevent reoccurrence, COPC repaired oil dump and will continue to monitor performance of oil dump.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
