If a Watercourse was Impacted, Describe Fully.*		
Describe Cause of Problem and Remedial Action Taken.*  On Wednesday July 29, Triple S gauger reported to the Animas Operations Tech a spill on the Atlantic B LS 4 well location. Approximately 15 barrels of production water spilled into the containment area (cellared – side walls visible) around the below grade tank (BGT). A leak in the tank is suspected. All fluid soaked away in the secondary containment. Fluid did not leave location. The incident will be investigated.		
Describe Area Affected and Cleanup Action Taken.* Soil on location and a nearby natural drainage was impacted. The area will be allowed to dry and any salt stain will be removed.		
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
