OIL CONS. DIV.  
DIST. 3

#### Describe Cause of Problem and Remedial Action Taken.\*

On July 10, 2007 a small liquid spill (1bbl) was reported to COP. Upon further investigation / excavation of the spill area, it was determined that the point of origin of the leak was from an underground gas line. It has been determined that approximately 1.5 MMCF was released, over several days, from the line into the ground. The failure was a result of CO2 corrosion.

COP is in the process of implementing a comprehensive inspection program as part of an Asset and Operation Integrity strategic improvement plan.

#### Describe Area Affected and Cleanup Action Taken.\*

The well was shut in and the area was excavated. The line was repaired and placed back in service.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
