Describe Cause of Problem and Remedial Action Taken. (Attach Additional Sheets If Necessary)

The water dump valve on the separator froze allowing produced water to dump to the condensate tank. The load line valve on the condensate tank then froze and cracked. Approximately 26 bbls of condensate and 4 bbls of produced water leaked into the bermed area. No fluids were recovered.

Describe Area Affected and Cleanup Action Taken. (Attach Additional Sheets If Necessary)

Soil borings were conducted inside the bermed area. The condensate tank will be moved and impacted soils will be excavated to a depth of 4 feet and landfarmed on location.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
