If a Watercourse was Impacted, Describe Fully.*

Describe Cause of Problem and Remedial Action Taken *

A spill of 5.8 BBL of produced water was discovered at the Dalsant #1A at approximately 9:30 a.m. on 3/14/07. The spill occurred due to a hole in the side of the 210 BBL condensate tank. The volume of the spill was determined by tank gauges, with 6" of produced water being lost from the bottom of the condensate tank. All of the spilled fluid was contained within the tank berm on location.

Describe Area Affected and Cleanup Action Taken.*

All of the spilled fluids remained within the bermed area, but none was recoverable. The impacted soils will be raked for remediation, if necessary.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
