By Whom? Monica D. Johnson Was a Watercourse Reached?			RCUD JAN 29 'OR
was a watercourse Reached? ☐ Yes ☒ No	If YES, Volume Impacting the Watercourse.		
If a Watercourse was Impacted, Describe Fully.*	.		DIST. 3
produced water spill of 16 BBL at the San Juan 32-8 Unit #218A on the afternoon of 1/24/08 due to a tank overflow. The tank overflowed when the transfer pump failed to start and the high level shut down failed. Upon discovery, the transfer pump was started up and the tank level was pumped down. All of the spilled fluids were contained within the berm, and 5 BBL was recovered by vacuum truck.			
Describe Area Affected and Cleanup Action Taken.* All of the spilled fluids were contained within the berm, and 5 BBL was recovered by vacuum truck. The high level shut downs and telemetry will be checked to ensure they are working properly. The affected soils will be powerwashed to thin out the compressor oil and then vacuumed up with a truck. Fertilizer will be raked in to the impacted soil to promote rehabilitation, and will be evaluated for any further remediation (excavation) if needed. This is scheduled to begin by 2-1-08. A final report will be sent upon the completion of remediation activities.			
I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
