Describe Cause of Problem and Remedial Action Taken.\* **A spill of 5 BBL produced water occurred at the Jicarilla K #16E at approximately 11:00 a.m. on 3/30/06 during rig operations. The rig crew had pulled out of the hole laying down 3-1/2" drill collars, closed the blind rams from the remote accumulator, and then took a short break. While on break, the wellbore started unloading fluid, spilling an estimated 5 BBL produced water from the wellbore to the area around the rig. The hydraulic pump on the accumulator had quit working. They then manually closed in the blind rams and secured the well.**

Describe Area Affected and Cleanup Action Taken.\* **The area affected was the rig floor and surrounding soil around the wellhead. The blind rams were manually closed and the well was secured. All spilled fluids (5 BBL) were recovered.**

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
