Describe Cause of Problem and Remedial Action Taken. (Attach Additional Sheets If Necessary)

The load line valve on the condensate storage tank froze and broke allowing the contents of the tank (145 bbls of condensate and 33 bbls of produced water) to leak out into the bermed area around the tank.

Describe Area Affected and Cleanup Action Taken. (Attach Additional Sheets If Necessary)

All fluids were contained inside the tank berms, but no fluid was recovered. After the bermed area dries, soil borings will be conducted to determine the depth of impact and determine if excavation is necessary.

Mark Kelly (BLM) was also verbally notified on 1/24/01.

I hereby certify that the information given above is true and complete to the best of my knowledge and understand that pursuant to NMOCD rules and regulations all operators are required to report and/or file certain release notifications and perform corrective actions for releases which may endanger public health or the environment. The acceptance of a C-141 report by the NMOCD marked as "Final Report" does not relieve the operator of liability should their operations have failed to adequately investigate and remediate contamination that pose a threat to ground water, surface water, human health or the environment. In addition, NMOCD acceptance of a C-141 report does not relieve the operator of responsibility for compliance with any other federal, state, or local laws and/or regulations.
